REACT JS

1. Project Title

FinTrack Compliance Settle – Financial Compliance Monitoring and Audit Management System

2. Problem Statement

Objective

FinTrack Compliance Settle is a web-based financial compliance management platform that enables organizations to monitor financial transactions, verify transaction records, detect suspicious activities, review flagged transactions, manage approval workflows, and assign audit tasks efficiently.

The system focuses on providing a centralized dashboard for compliance monitoring while ensuring accurate transaction tracking, risk analysis, auditor management, and regulatory compliance across multiple departments and company branches.

3. Project Description

FinTrack Compliance Settle is a React.js application developed to simplify financial compliance monitoring and auditing processes.

The platform allows users to:

- Monitor company transactions
- Manage compliance records
- Verify transaction authenticity
- Review suspicious transactions

- Analyze budget risks
- Manage approval workflows
- Assign audit tasks
- Search transaction records quickly

The application provides an efficient compliance management experience while demonstrating modern frontend development practices using React.js.

4. Tech Stack

Frontend

- React.js
- Vite
- JavaScript (ES6)
- React Hooks

Styling

- Tailwind CSS
- CSS3

State Management

- useState
- useEffect

Deployment

- Vercel

Development Tools

- VS Code
 - Git
 - GitHub
-

5. Features Implemented

Dashboard

Displays a centralized overview showing:

- Total Transactions
- Flagged Transactions
- Compliance Status
- Department Summary

Provides quick visibility into overall financial compliance activities.

Transaction Table

Displays transaction records including:

- Transaction ID
- Department
- Branch
- Amount

- Compliance Status
- Risk Level

Allows auditors to monitor all financial records from a single interface.

Transaction Form

Allows users to:

- Add Transactions
- Edit Transactions
- Update Compliance Data

Provides efficient transaction management and record maintenance.

Review Queue

Displays flagged transactions waiting for compliance review.

Purpose:

- FIFO Processing
 - Organized Review Workflow
 - Priority Monitoring
-

Approval Rules Hub

Stores and manages approval policies.

Features:

- Department Rules
- Approval Levels
- Transfer Policies
- Compliance Guidelines

Provides centralized approval workflow management.

Auditor Task Assignor

Automatically assigns audit tasks to auditors.

Purpose:

- Balanced Work Distribution
 - Faster Case Resolution
 - Efficient Resource Allocation
-

Quickest Problem Finder

Uses graph traversal algorithms to locate compliance issues quickly.

Implemented Using:

- BFS Algorithm
- Dijkstra Algorithm

Benefits:

- Faster Investigation
- Efficient Error Detection

- Reduced Audit Time

Search Bar

Allows quick searching of:

- Transaction IDs
- Departments
- Branches
- Compliance Status

Improves transaction lookup efficiency.

8. State Management

The application uses React Hooks to manage:

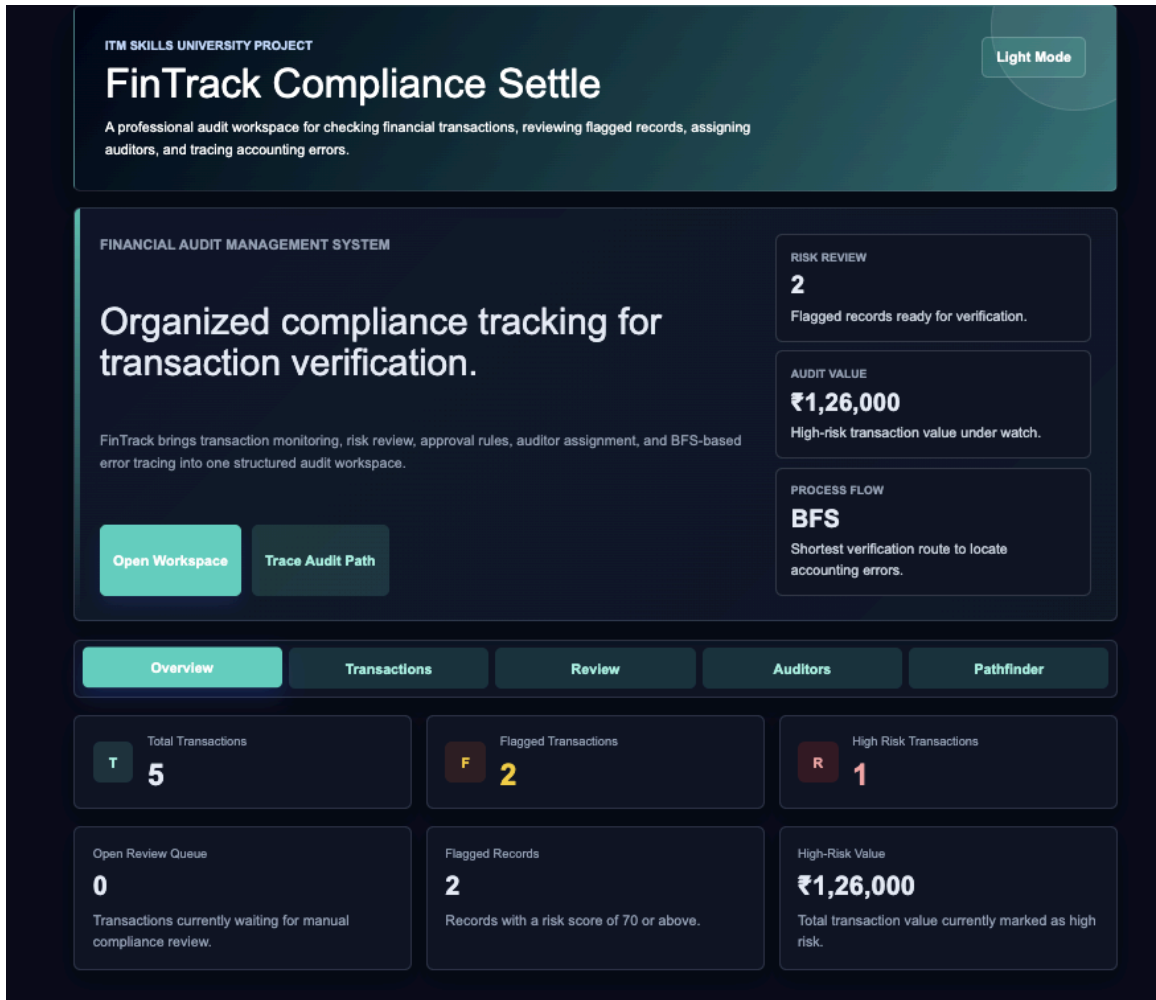

- Transaction Data
 - Compliance Records
 - Review Queue Data
 - Auditor Assignments
 - Search Results
 - Dashboard Statistics
-

10. Challenges Faced

Managing Large Transaction Records

Handling multiple financial records efficiently.

Compliance Verification

Ensuring accurate compliance validation for every transaction.

Queue Processing

Managing review queues for flagged transactions.

Risk Analysis

Identifying high-risk transactions effectively.

Auditor Assignment

Distributing audit cases fairly among auditors.

Search Optimization

Providing fast and efficient transaction lookup.

11. Future Enhancements

- AI-Based Fraud Detection
 - Real-Time Compliance Alerts
 - Advanced Analytics Dashboard
 - Automated Audit Reports
 - Multi-Branch Management
 - Email Notifications
 - Role-Based Access Control
-

12. Conclusion

FinTrack Compliance Settle successfully provides a complete financial compliance management solution through transaction monitoring, review queue management, approval workflow handling, risk analysis, and auditor assignment.

The project demonstrates practical implementation of React.js concepts including component-based architecture, state management, data handling, and responsive user interface design.
